

# NETWORKING APPLICATION FOR STREAMLINING HEALTHCARE SERVICES

Industry  
Healthcare

Technology  
CodeIgniter | CSS3 HTML5

## ABOUT PROJECT

Our Norwegian client had the idea to build a healthcare social networking application that becomes a platform for exchange of information between patients and medical practitioners. Through the platform, the medical practitioners can register and exhibit their services, and patients can book appointments online.

## THE REQUIREMENT

- Online registration with profile creation and showcase of services
- Advanced search feature for patients to find the nearest practitioners & services
- Online booking for appointments based on availability of medical practitioners
- Integration of Google Map to reach the location of clinic
- Seamless backend operations for management of multiple users

“ We built a networking platform that offers effective information sharing between patients and doctors, and added to the benefits of the community by streamlining private healthcare services ”
